Comment On Claim Interpretation

The invention in this case is a water treatment and pressurization system for cooling the air supplied to a gas turbine. The system includes one or more pumps, and the claims as currently amended all require a so-called "electric-electronic inverter" for regulating the speed or rotation rate of the pumps (claim 1, lines 14-16). The "inverter" feature was initially added in claim 3, now canceled, and claim 3 was previously rejected under 35 USC 112 but not over prior art. The §112 rejection, moreover, was based on an interpretation of the term "inverter" as a device that merely converts DC to AC current. Applicants argue in reply that the term "inverter" can also be applied to variable frequency drive systems (response, page 8), and applicants cite a Wikipedia entry to support their position. The Wikipedia entry states that entire variable frequency drives, comprising AC motors along with DC to AC conversion devices (inverters), can simply be called "inverters". For examination purposes, the claimed "inverter" is therefore now interpreted as comprising an entire drive system of this type, and the §112 rejection has consequently been withdrawn.
